

60. The method of claim 57 wherein the substantial-cut line extends between approximately 93 and 95 percent the way through the sheet.

61. A printable sheet construction, comprising:
a single-sheet construction printable sheet divided into a plurality of sheet portions;

at least one substantial-cut line formed in the sheet and defining at least one of the perimeter edges of at least one of said sheet portions;

said at least one substantial-cut line extending through a substantial portion of a thickness of said sheet thereby forming at least one thin uncut intact sheet portion;

said sheet, after having passed through a printer or copier and indicia printed on said sheet portions, being separable along said at least one substantial-cut line to form at least in part a plurality of individual printed media; and

said at least one thin uncut intact sheet portion of each of said sheet portions collectively comprising the sole means for keeping said sheet portions together as said sheet is passed through the printer or copier and thereby maintaining the integrity of said sheet until separated to form the individual printed media.

62. The printable sheet construction of claim 61 wherein said substantial-cut line extends between approximately 70 and 98 percent the way through said sheet.

63. The printable sheet construction of claim 61 wherein said substantial-cut line extends approximately 90 percent the way through said sheet.

64. The printable sheet construction of claim 61 wherein said substantial-cut line extends between approximately 93 and 95 percent the way through said sheet.

65. The printable sheet construction of claim 61 wherein said at least one substantial-cut line comprises first and second substantial-cut lines extending the length or width of said sheet.

66. The printable sheet construction of claim 65 further comprising parallel and spaced weakened separation lines extending perpendicular to and between said first and second substantial-cut lines on said sheet.

67. The printable sheet construction of claim 66 wherein said substantial-cut lines and said separation lines together define a column or row of said sheet portions.

68. The printable sheet construction of claim 67 wherein end portions of said column or row define waste strips.

69. The printable sheet construction of claim 68 wherein said column or row defines a first column, and further comprising third and fourth substantial-cut lines in said sheet and additional separation lines extending therebetween and together therewith defining a second column of sheet portions, parallel to said first column.

70. The printable sheet construction of claim 69 wherein said additional separation lines comprise through-cut lines, extending between said third and fourth substantial-cut lines.

71. The printable sheet construction of claim 66 wherein said weakened separation lines comprise through-cut lines.

72. The printable sheet construction of claim 61 wherein the individual printed media comprise printed rectangular business cards.
